| <b>Title of Assignment:</b>         | Git Setup & Basic Workflow                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Theory:</b>                      | <p>Git is a distributed version control system that helps developers track changes in source code, collaborate efficiently, and maintain different versions of a project. GitHub is a cloud-based platform that hosts Git repositories and enables collaboration.</p> <p>In this assignment, a GitHub repository was created and cloned to the local system. A README.md file was created, staged using git add, committed with git commit, and uploaded to GitHub using git push. This demonstrates the basic Git workflow for managing and synchronizing project files between a local machine and a remote repository.</p> <p><b>Commands Used</b></p> <ol style="list-style-type: none"><li>1. cd D:\CCodes – Navigated to the directory where the repository would be stored.</li><li>2. git clone git clone https://github.com/AdarshCodes1221/my-git-practice.git – Cloned the remote GitHub repository to the local machine.</li><li>3. cd cd my-git-practice – Entered the cloned repository folder.</li><li>4. echo "# DevOps Lab" &gt; README.md – Created the README.md file with initial content.</li></ol> |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
