

TW1.2 - Jira Project & Issue Tracking Report

Name: Adarsh Jha
PRN: 23070122261
class:cs B
Subject: DevOps Lab

Aim

To understand project management and issue tracking using Jira.

Objectives

Create a project, create epics and stories, assign tasks, manage workflow and monitor progress.

Theory

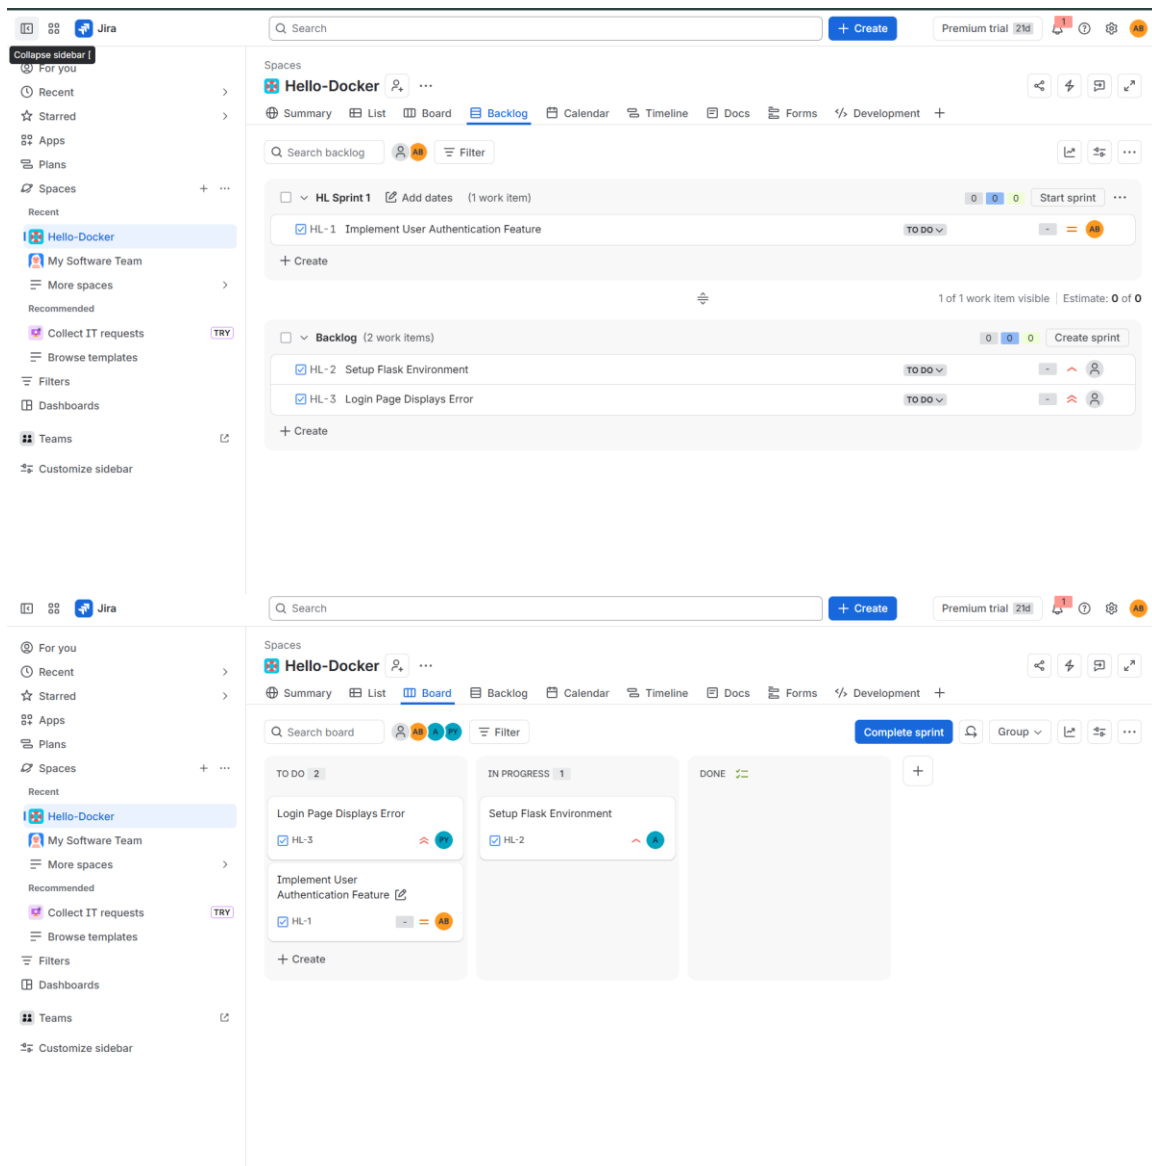

Jira is a project management and issue-tracking tool developed by Atlassian. It supports Agile methodologies including Scrum and Kanban. Teams can create issues, assign responsibilities, prioritize work, monitor sprint progress, and generate reports.

Software Requirements

Jira Cloud account, Web browser, Internet connection.

Procedure

Create a Jira project, configure workflow, create backlog items, assign tasks, update status

Workflow

To Do → In Progress → Done. Explain each transition and how issues move through the lifecycle.

Learning Outcomes

Students understood Agile project management, issue tracking, sprint planning and workflow automation.

Conclusion

Jira improves team collaboration, planning and software project management.
